

CREDIT CARD ISSUES?

With new technologies and increasing demands from the new credit card reader and laser printers, we are forced to switch the inverters we are currently using. To work properly with the new reader we have switched to a 1000 watt pure sine inverter. All new Tool Trucks purchased from Summit Bodyworks since 10-01-09 will have these inverters installed.

We have put together a kit for existing trucks in the field that are in need of the new inverter.

The kit price is **\$548.²⁰**

Kit includes:

1000 watt pure sine inverter

120 amp breaker

3- 4 awg cables with crimped connectors

Remote wire to existing switch panel control relay

Kits are made to order. We will need to know the current location of your electrical system, whether it is built into the wall or under a shelf section. The inverter is also available by itself for **\$472.²⁰**.
